Eco-CSMers

Attached is a partially revised Portland Harbor eco-CSM. please read the notes below, take a close look, and provide feedback to me ASAP. I'll track and update and distribute when I've received feedback from everyone (DEQ, EPA, FWS, Tribes, NOAA).

Notes:

- 1) There are 3 worksheets in this file:
 - A. Portland Harbor Eco CSM
 - B. Pathway Definitions
 - C. Pathways (a new sheet that I added today)
- 2) The CSM worksheet has been revised based on today's session. I've deleted the exposure mediums of "on-site surface soil" and "on-site subsurface soil". I changed "Riparian/Bank soil" to "Terrestrial Riparian" and "Riparian Bank/Water" to "Seeps". I repositioned boxes and arrows as needed. This was a gigantic pain, but hopefully I got it right.
- 3.) I updated the pathway indicators for the River Sediments medium based on our work today. I shaded those 3 rows bright green to indicate that we're "done" with the exposure routes for this medium.
- 4.) The "Pathways" worksheet that I added is a template that we can use to fill in pathway indicators independently and then compare. Please take a look and provide input ASAP on the appropriate rows (i.e., DEQ, Tribes, etc.)
- 5.) This version does NOT include revised definitions.

Thanks,

-R
